PROFILE

Computer Science student at Chitkara University with strong proficiency in Java and modern web technologies including React.js and Node.js. Experienced in building full-stack MERN applications and cloud-deployed systems, with hands-on work in real-time platforms and AI-integrated products. Possesses a solid foundation in data structures, algorithms, and system design. Passionate about Artificial Intelligence and Machine Learning, with a growing interest in building intelligent, data-driven applications that solve real-world problems at scale. Demonstrates strong analytical thinking, adaptability, and a collaborative engineering mindset aligned with fast-paced product environments.

EDUCATION

Chitkara University

Bachelor of Engineering in Computer Science and Engineering – CGPA: **8.37 / 10**

Rajpura, Punjab

Jul 2023 – Jul 2027

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming, System Design

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), C++, SQL

Backend: Node.js, Express.js, REST APIs, JWT, Auth0

Cloud & DevOps: AWS (EC2, S3), Docker, Git, CI/CD

Frontend: React.js, Tailwind CSS, HTML5/CSS3

Databases: MongoDB, MySQL

Core CS: DSA, OOP, OS, Computer Networks, System Design

PROJECTS

DonorLink – Smart Blood Bank Platform | *React.js, Node.js, Express.js, MongoDB, JWT* | *GitHub* 2025

- Engineered a full-stack MERN web platform connecting **3 user roles** (donors, recipients, blood banks) in real time, reducing coordination overhead for critical supply-demand matching across **8+ blood types**.
- Built a real-time blood-availability dashboard and donor-registration flow, achieving **~40% faster** search response for urgent requests via type-based indexing on MongoDB collections.
- Designed a secure RESTful API with JWT-based authentication and role-based access control, exposing **15+ endpoints** and handling donation camp management modules end-to-end.
- Deployed backend on **Render** and frontend on **Vercel**, achieving a fully cloud-hosted production environment with zero-downtime deployments and automatic CI/CD on every push.

Euphoria – AI-Powered Mental Wellness Application | *React.js, Node.js, MongoDB, Google Gemini API* | *GitHub* 2025

- Architected a full-stack wellness suite delivering **3 assessment modules** (MBTI, PERMA, IQ) in a single React SPA, reducing page load time by **35%** through code-splitting and lazy loading.
- Integrated Google Gemini API to power a real-time AI mental health assistant, handling **500+ user interactions** with personalized emotional support and adaptive wellness recommendations.
- Developed a secure admin dashboard featuring live platform analytics and user activity logs, consolidating **10+ system health metrics** into a single monitoring interface.
- Designed **20+ scalable REST API endpoints** with Express.js and MongoDB, applying schema validation and aggregation pipelines to cut average query response time by **30%**.

PROGRAMMING

LeetCode (leetcode.com/u/Stoic_97): Solved **100+ problems** across Easy, Medium, and Hard difficulty levels, focusing on arrays, dynamic programming, graphs, and system design patterns.

Striver A-Z DSA Sheet (TUF): Completed **134+ problems** and actively progressing through one of the most comprehensive DSA problem sets for interview preparation.

CERTIFICATIONS

Cloud Computing Fundamentals – Duke University (Coursera)

Cloud Virtualization, Containers and APIs – Duke University (Coursera)

Networking Fundamentals – Akamai Technologies, Inc. (Coursera)

Python Data Analytics – Meta (Coursera)
